DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 09/21/2005 has been considered by Examiner and made of record in the application file.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Frederick Yi-Tung Cho (UK Patent Application GB 2 322 504 hereinafter, "Cho").

Consider claim 1, Cho teaches a clamshell-type mobile terminal (100) for a wireless communication system, comprising: a lower casing (103) comprising a keypad (107) with input keys; an upper casing (102) comprising a display (105), said lower casing and said upper casing being connected by a hinge mechanism connecting the lower casing and the upper casing so that the lower casing and the upper casing can be folded onto each other, whereby the lower casing is the casing part, which during operating the mobile terminal is in the palm of the hand of the user, whereby the upper casing is extending away from the hand of the user in an opened state of the mobile terminal and folded onto the lower casing in a closed state of the mobile terminal (see figs. 1 and 3, page 3 line 32 through page 4 line 16), whereby the hinge mechanism is located and arranged so that in the opened state, the lower casing lies above the upper casing enabling an easy access to input keys located close to the hinge mechanism on the lower casing (see figs. 1 and 3 page 4 lines 10-16), and whereby a rotation axis of the hinge mechanism forming a centre of the folding movement between the lower casing and the upper casing lies in a middle plane of the lower casing (see figs. 1 and 3 page 4 lines 10-16).

Consider claim 2, Cho further teaches the hinge mechanism comprises at least one fixed structure projecting from the display plane of the upper casing and at least one rotating structure movably connecting the lower casing to the at least one fixed structure (see figs. 1 and 3 page 4 lines 10-16).

Art Unit: 2618

Consider claim 3, Cho further teaches the at least one fixed structure and the lower casing respectively comprise through holes into and through which the at least one rotating structure extends (see figs. 1 and 3 page 4 lines 10-16).
